YOUR LIFE
COULD BE BETTER
WITH TRANS

BRIGHT AND CLEAR

Unparalleled luxury with 360° panoramic
view for an elevated experience

WIDER VISIONS

Slim alloy aluminum frame for a modern
and luxurious aesthetic

DETAIL ORIENTED

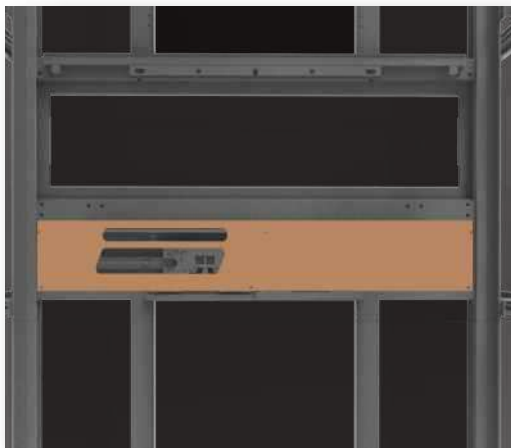

Integrate safety and comfort
into all details for manufacturing
guidance

UNIQUE DETAILS OF TRANS T-PLUS SERIES

T-Plus Series home lift focuses on details that suits your daily needs

Improvement of manufacturing details, such as car sill courtesy light, landing door cover plate, cabin panel cover plate, has changed the home lift from an industrial product to a aesthetic household appliance!

CONSIDERATE CARE OF DESIGN

e-Power

In the event of a power failuer, e-Power runs the elevator to the nearest floor for passengers to evacuate safely.

No pollution during installation

The overall modular installation design eliminates the need for cutting, welding, and painting during installation, which is harmless to the environment.

Low operating noise

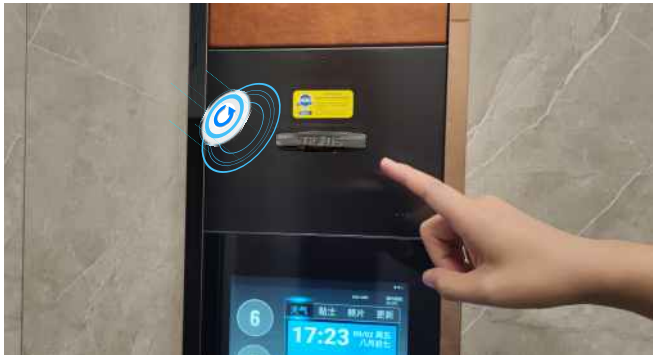

The operating noise of the elevator is only about 50 decibels, which is equivalent to the volume of the air conditioner during operation. Users can sleep peacefully without worrying about noise pollution at their homes.

e-Sliding key rescue

(Used when the screen is stuck)

If the doors are unable to open with the button on the smart screen, users can reset the smart touch screen by sliding the logo sign at the top of the smart touch screen to the right to restart the elevator.

Anti-trap hand edge

The traditional elevator can only protect elders from door entrapments , while Trans home lift can also protect children.

The anti-trap hand edge makes the elevator door run backward and slowly by triggering the protective device of the upright, which avoids the risk of injury of the palm being squeezed by the glass door and protects every member of the family.

Energy efficient and environmental friendly

Trans home lift offers costs effective solutions when it comes to operating and maintenance.

Parts and components are provided with durable life span and recyclable materials.

BRINGING YOU AN
INTELLIGENT AND
FUTURISTIC LIFESTYLE

NEW e-Touch

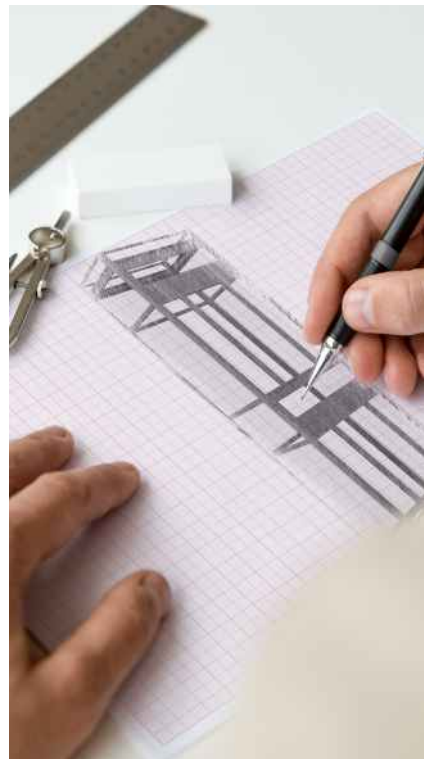

Smart home lift control system with password protection

e-Frame®

Trans e-Frame provides alloy aluminum frame shaft structure with slim, elegant frame and varied color choices.

Precise manufacturing process and automatic equipment, guarantees the slim shape and pinpoint frame connection. TRANS e-Frame provides you the seamless design, welding-free and rust-resistant lift shaft structure!

Satin white P001

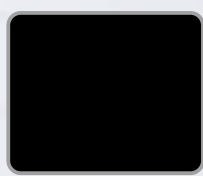

Shining grey P004

Bronze gold P014

Light brown P009

Satin black P010

e-Lighting

CAR CEILING AMBIENT LIGHTING

Interactive ambient interior lighting that flows along the running direction of the elevator, offering you with a vibrant and lively riding experience.

SWING DOOR SERIES AUTOMATIC

Swing doors are an ideal solution for limited hoistway space. Trans home lift provides single swing door and double swing door with slim door frame and much wider glass.

AUTOMATIC DOOR SERIES

Customers can choose to use auto-doors based on the size of the hoistway and their preferences. Auto doors consist of car door and landing doors. The door opening are divided into 2 panels center opening and 2 panels side opening.

HIGHLIGHTS

Design patent: ZL 2015 3 0207745.0

INTELLIGENT MAN-MACHINE SYSTEM

- Industrial grade touch screen intelligent terminal
- Multiple theme selections
- Real time analysis of IoT cloud database (optional)
- Mobile Application Online control (optional)
- Intelligent energy-saving,
automatically turn off ventilation
and car lights during standby

e-Call

e-Call, ensure that users can promptly call out for help when trapped in the elevator.

- When the elevator fails to run, the e-Touch function will appear an emergency call interface, passengers can select a preset number to call for help; If a fault occurs and stops running for more than 6 seconds, the system will automatically dial the emergency contact number.
- The e-Touch function allows passengers to contact preset mobile numbers in the system in case of emergency.

T-BOX APPLICATION

With our exclusive "T-BOX" App, you may control your lift with your phone or tablet anytime, anywhere.

While using the app, you can know:

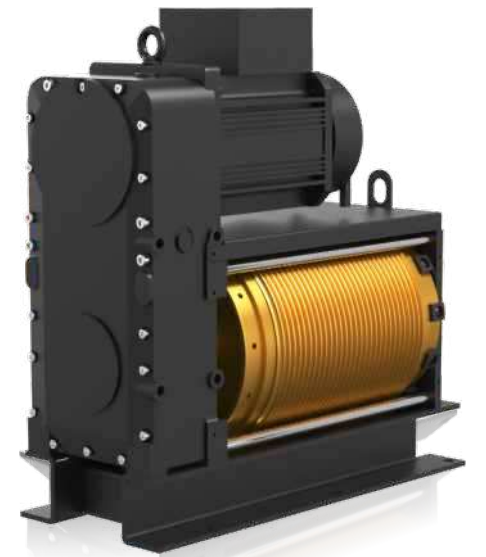

- Real-time lift operation status
- Real-time lift information
- Long-distance lift controlling
- Lift fault record
- Lift running record

DRIVE AND CONTROL

Our patented e-Motor proves to you a state of the art motor system that enhances efficiency and power.

- "Star-sealing" function prevents the elevator from stalling or falling while operating, improving safety;
- Smooth running and low noise;
- Different from traditional geared drum machine, Trans e-Motor drum drive is characterized with high efficiency, durable life span and low noise during operation;
- Low starting current has very limited impact on family power grid.

Design patent: ZL 2020 2 1188771.5

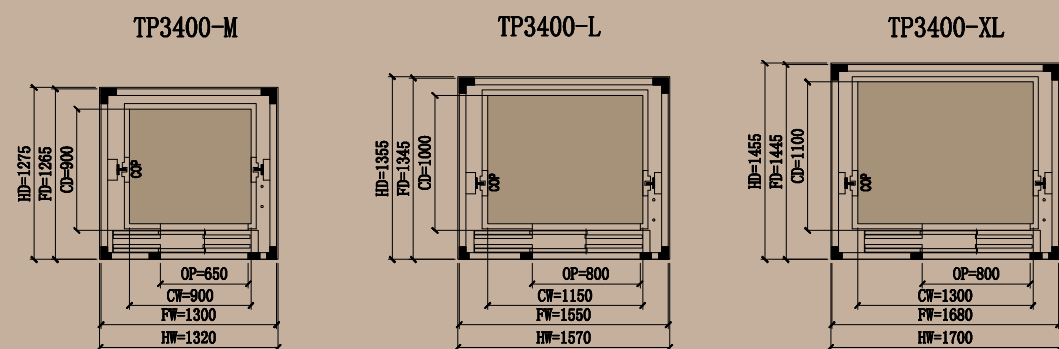

Control system

The new generation TRANS control system has made a breakthrough on traditional design concept by integrating modern aesthetic elements combined with the advanced e-Drive control technology. Our breakthrough portraits the perfect combination of aesthetics and technology by creating more compact and minimalistic designs with enhanced user interfaces.

Swing Door-Single

2 Panels Center Opening

STANDARD FUNCTION

RELIABLE

- Hoistway self-learning
- Automatic fault diagnosis
- Voltage fluctuation detection
- Door re-open signal (Auto door)
- Automatic releveilling system allows the elevator to releve itself after maintenance mode
- Auto correction of floor position signal
- One-button emergency calling system (Customer provides mobile phone card)
- Position and floor name record during power-off
- Emergency rescue device
- Auto emergency rescue device
- Repeated close door (Auto door)
- Automatic fault record system
- Floor bypass setting
- Lift running time protection function

COMFORT

- Open the door automatically at arriving (Auto door)
- Directionless or co-directional same floor hall calling opening (Auto door)
- Hall calling button to open doors (Auto door)
- Energy saving function
- Flooring and lift status indicator
- Flexible floor setting
- Floor and elevator status indicator (HB2)
- Open and close button (Auto-door)
- Manually floor selection
- Car ventillation
- Floor indicator set by users
- Elevator monitoring app T-BOX (13.3-inch touch screen COP standard)
- Music playback function (13.3-inch touch screen COP standard)
- Automatic main landing return

STANDARD FUNCTION

SAFE

- Inspection mode
- Door closing time protection (Auto-door)
- The light curtain protection device
- Emergency running operation
- Speed feedback detection
- Buffer device
- Unintended car movement protection
- Rope over-winding protection
- Safety circuit protection
- Faulty relay detection protection
- Limit switch protection
- Upper and lower limit protection device
- Overheat protection
- Electric brakes
- Pre-torque output
- End station for speed and floor number correction
- Low-speed self-rescue
- Car rollback protection
- Contactor feedback detection
- Overload sensor
- Main contactor and brake contactor protection
- Power trip lighting and alarm
- Closed door protection (Auto-door)
- Manual car-top operations
- Timing self-test
- e-Double key rescue (optional)
- Child anti-trap hand sensor (optional)
- Faint protection (optional)
- Car position detection
- Self-rescue running mode (13.3-inch touch screen COP standard)
- e-Sliding key rescue (13.3-inch touch screen COP standard)
- e-Power outage operation device
- Instant emergency messaging - Emergency wireless calling function
- Man-trap auto calling system
- Double anti-stall protection
- Password floor unlock function (13.3-inch touch screen COP standard)
- Biometric floor unlock function (13.3-inch touch screen COP standard)
